0.0.1	2015.03.06	Initial Version	kmc

Contents

1	Getting Started With Autotools	1
1.1	Initial configure.ac	1
1.2	Initial Makefile.in	1
2	Pkg-config	2

Chapter 1

Getting Started With Autotools

1.1 Initial configure.ac

In the top level of your project, create the simplest `configure.ac`. This file will eventually be turned into our `configure` file by `autoconf`.

```
1 AC_INIT([libabc], [1.0]) # BOILERPLATE BEGIN: name of lib and the version
2 AC_OUTPUT # BOILERPLATE END
```

Note: this is the simplest example. But it does nothing. We can transform it to a do nothing `configure` and test it:

```
1 autoconf
2 ./configure
```

1.2 Initial Makefile.in

Next, let's make our initial `Makefile.in`.

Chapter 2

Pkg-config

What of it?
